## SONOMA COUNTY

ANNUAL ACREAGE, CROP, AND VALUATION REPORT FOR THE CALENDAR YEAR 1942

In compliance with Section 65.5 of the Agricultural Code of the State of California, I herewith submit the annual report to the Board of Supervisors of Sonoma County and the State Director of Agriculture. The acreage submitted in this report does not include the nonbearing trees. The crop production is given in the commonly accepted units as box, ton, bale, or pound, when ready for shipment. In some cases as hops, all labor costs are included; however, in green and dried fruits, it is the price on delivery at the door of the packing house or processing plant.

Poultry meat is computed by the pound, while in the case of turkeys, it is the average weight bird at the average price per pound. All dried fruits are computed on the price per dried pound, with the exception of pears, which is on a green ton basis.

The total valuation of all crops has an increased valuation of \$7,000,000 over 1941, which was \$26,133,404. This increase is due to both a larger production in some of the principal products such as poultry, sheep, vegetables, and also the increase in price per unit. Poultry, of course, leads with a total value of \$17,737, 692, which is \$4,000,000 above the 1941 income, due to the higher average yearly price of eggs and also poultry meat.

Green and dried fruit shows a decrease in crop, but the prices were much higher. In the case of boxed apples, almost 300 percent. Some hops sold as high as \$1.50 per pound, but the sum total of these high priced lots was comparitively small as compared to those under contract, so that the average price was only 7¢ over that of last year.

Respectfully submitted,

Agricultural Commissioner
